

Portfolio

Cia Ambiental

Since 2003, Cia Ambiental offers its clients specialized and updated advice in the environmental area. The company has a multidisciplinary team trained in the following areas:

> Environmental Engineering, Environmental Management, Biology, Forest Engineering, Chemical Engineering, Social and Environmental Communication, Geography, Geology, Socioeconomics, Bioprocess Engineering and Environmental Law.

Our values

Ethics

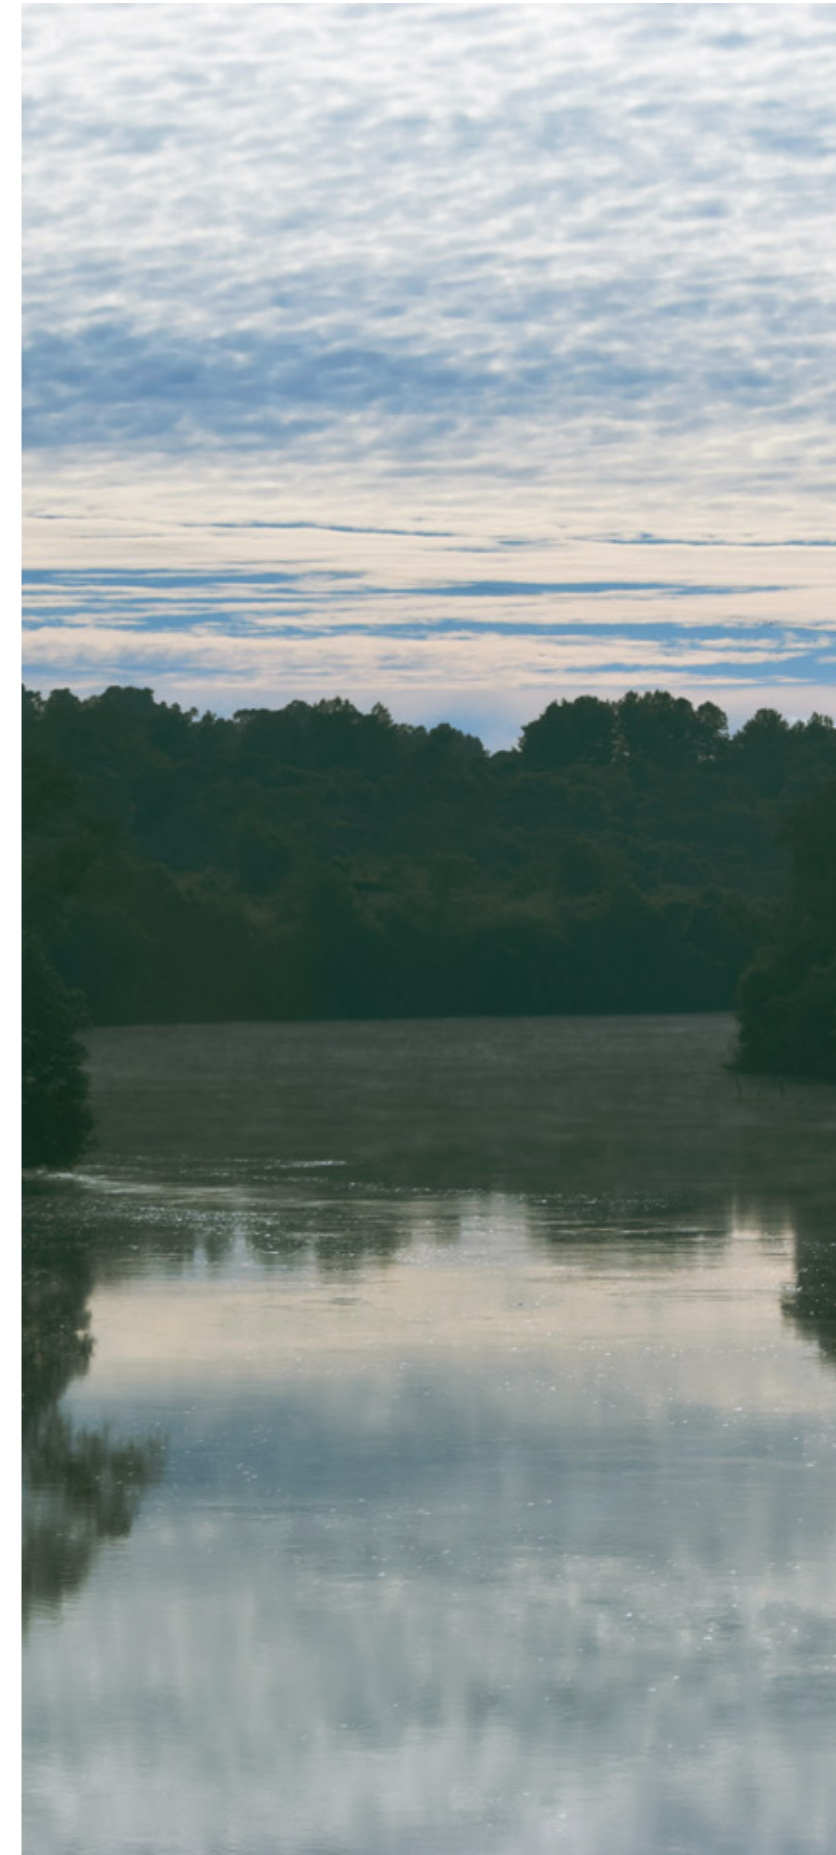

To be coherent, fair and transparent in our attitudes, actions and developed activities.

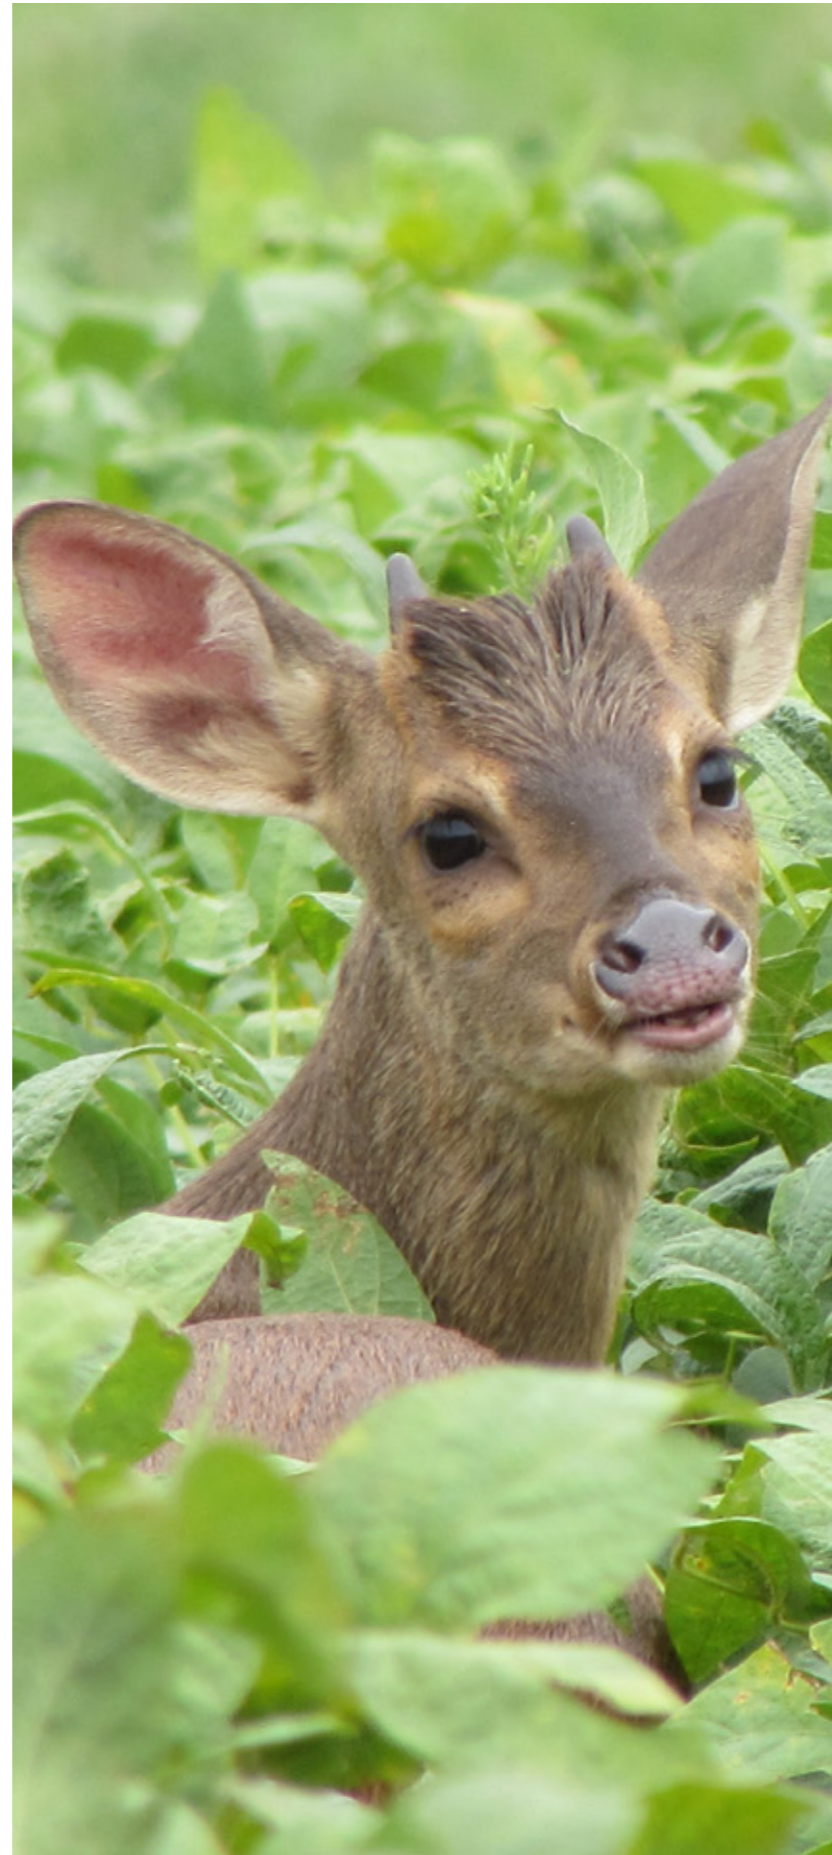

Competence

Keep the company up to date by always seeking the highest qualifications and innovations.

Relationship

Cherish relationships based on commitment, responsibility and trust with customers, suppliers and employees.

Our values

Commitment

Cultivate loyalty and cooperation, integrating the actions that prioritize the objectives of the company.

Performance

Promote results that meet and surpass the expectations of the clients, employees and managers of the organization, focusing on environmental sustainability.

Respect for the environment.

Equipment and structure

> Specialized technical team with more than 70 employees.

> Main office located in Curitiba and branch in Paranaguá.

> Specialist consultants and partner companies in the areas of archeology, communities and indigenous component.

> High technology equipment.

> Fleet of vehicles to carry out field work.

> Decentralized regional offices according to projects in progress.

Bush dog (*Speothos venaticus*) - rare species in image captured through photographic trap.

Equipment and structure

> Equipment for the monitoring and rescue of fauna.

> Water parameter meters for on-site analysis.

> Equipment for hydrometric services (water flow measurement / hydrosedimentology).

> Sound pressure level (noise) meters, vibration meter and CADNA-A software for acoustic propagation modeling.

> Opacimeter (atmospheric emissions meter).

Equipment and structure

> AERMOD-VIEW software for atmospheric dispersion modeling.

> Equipment for drilling and soil / geotechnical analysis.

> Equipment for sampling / management of flora.

> Structure for conducting planting programs.

> Softwares for forest inventory, geoprocessing and technical drawing.

> Partners in the areas of laboratory analysis, satellite images, risk and traffic analysis.

Our services

Services

Environmental licensing

We advise our clients in all stages of the environmental licensing, from the first studies to the necessary procedures for each license required.

Through the environmental licensing process, the environmental agencies issue licenses and authorizations for the location, installation, expansion and operation of enterprises and activities that use natural resources or that have the potential to cause pollution or degradation to the environment.

Services

Development and implementation of environmental studies, plans and programs.

- EIA / RIMA - Environmental Impact Study and Environmental Impact Report
- EIV - Neighborhood Impact Study
- RAP / RAS - Preliminary Environmental Report and Simplified Environmental Report
- PCPA / PCA - Environmental Pollution Control Plan
- EA / RA / PBA - Environmental Study, Environmental Report and Basic Environmental Plan

- PGRS - Solid Waste Management Plan
- PGRCC - Construction Waste Management Plan
- PDM - Municipal Master Plan
- Wildlife rescue and monitoring programs
- Planting programs
- Collection and evaluation of air, water and soil
- Noise monitoring
- Monitoring of atmospheric emissions
- Modeling of water quality, atmospheric emissions and noise
- Preliminary environmental assessment of areas for the installation of projects

Services

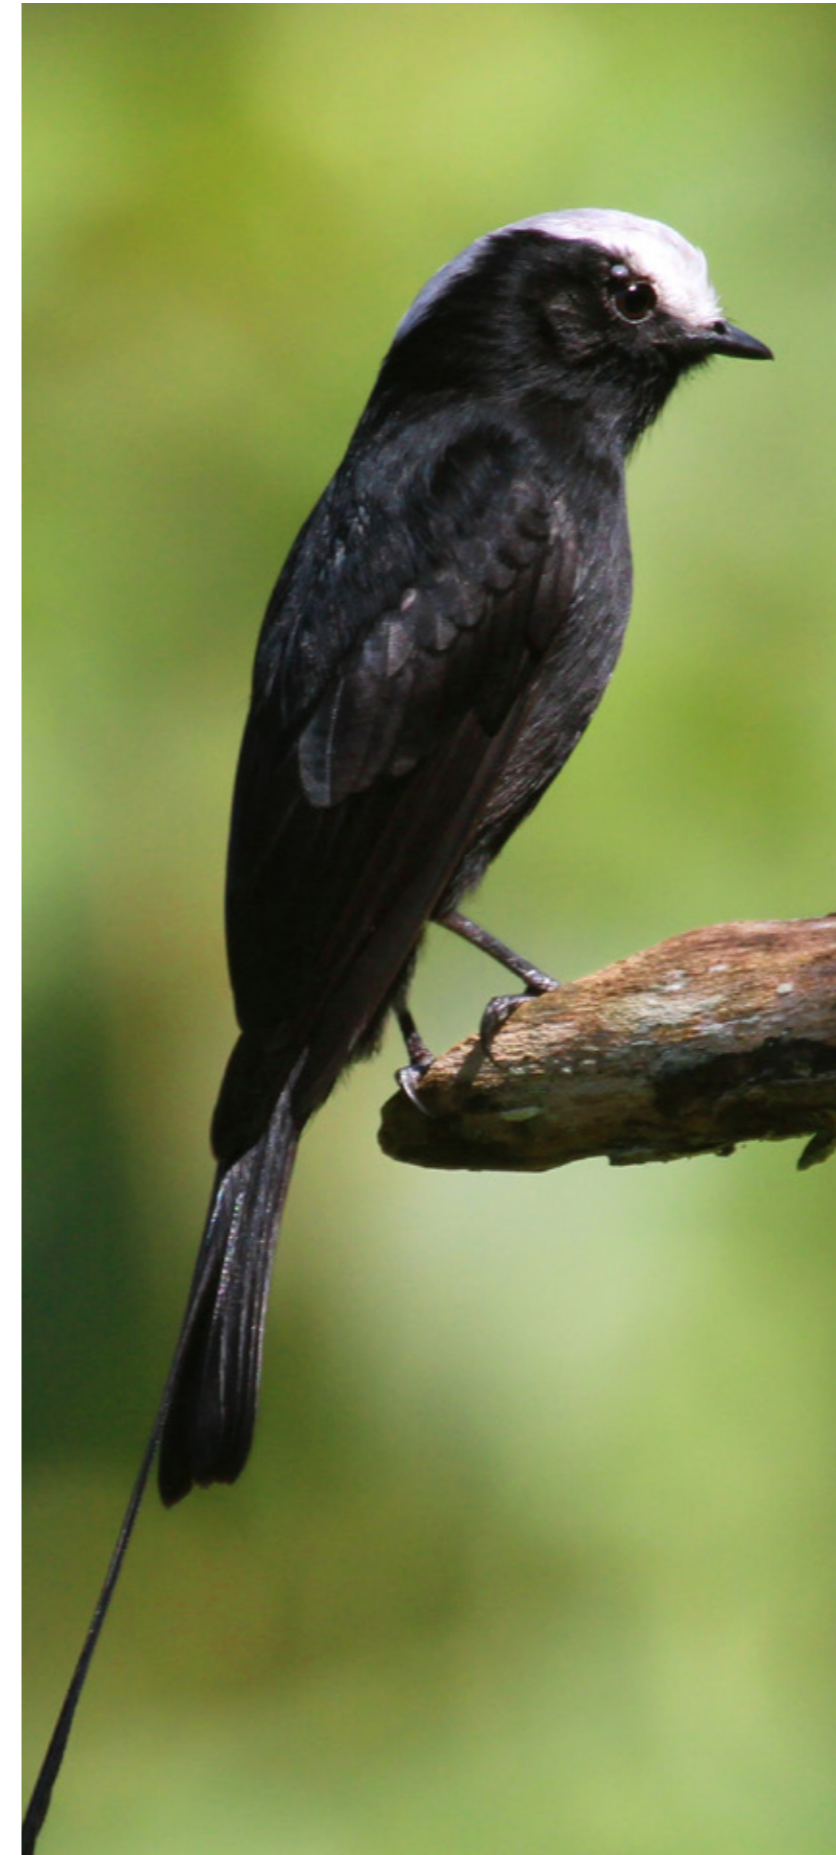

**Environmental education
and communication**

**Full assistance in the
processing of projects**

**Assessment of
environmental liabilities**

Environmental audit

**Mapping and environmental
cartography**

Services

Development of environmental management systems, including ISO 14.001

Public hearing organization and conducting

Training in the environmental area

Legal support in the area of environment

Areas of expertise

Areas of expertise

Industry and services

The licensing procedures for industrial activities and services vary according to the activity and size of the enterprises. Cia Ambiental assists its clients in carrying out the correct procedures for licensing each activity.

We are qualified to carry out the environmental feasibility analysis of projects being planned.

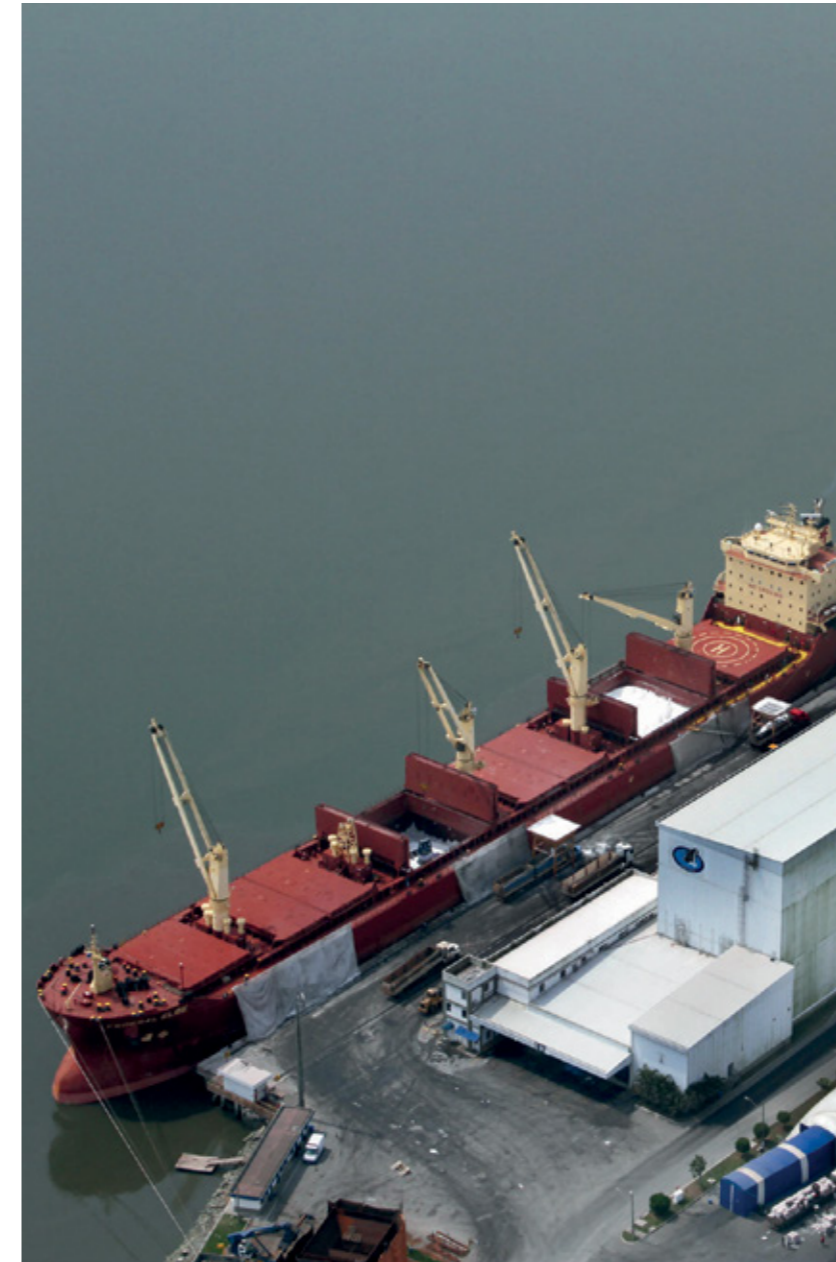

Areas of expertise

Infrastructure

Cia Ambiental has specialized technicians in the road, railroad and port logistics areas.

We operate both in the planning and implementation phases and in the environmental management of the operation of the structures.

Areas of expertise

Energy

Our services are compatible with all of the licensing phases of power generation projects, especially regarding the renewable energy generation:

- Hydropower
- Wind
- Solar
- Biomass

Areas of expertise

New technologies

In partnership with CDTA (Center for the Development of Environmental Technologies), Cia Ambiental studies new technologies to be able to solve any environmental issues our clients might present.

We mainly work on projects related to the use of agricultural and urban waste for the generation of renewable energy.

Areas of expertise

Environmental management and monitoring

We carry out the environmental monitoring during the construction and the operation of enterprises with the objective of continually improving the activities of our clients.

We also review the implementation of the environmental plans and programs established or required by the entrepreneur and the environmental agencies in order to guide and control the installation, operation, maintenance and other activities in accordance with the principles of environmental protection.
